

Germinator™

BETTER SEED CONTACT • BETTER YIELDS • MORE EFFICIENT YOU

GERMINATOR closing wheels maximize seed to soil contact by:

- Eliminating sidewall compaction
- Giving depth control
- Eliminating air pockets
- Fully closing the seed trench with inner rim shoulder firming
- Promotes consistent germination and emergence.
- Steel construction helps reduce down pressure needs in heavy soil and no till conditions. Highly effective in all tillage and soil conditions.
- Designed to clean rapidly in wet conditions.
- 050 steel insures longevity.
- Farm Journal magazine projects a break even with **only 170 acres** (Based on a 16 row-30" planter for corn or 262 acres on a 31 row-15" bean planter, considering a cost of \$160 per row, \$80 per wheel).
